

**CVE-2021-44228 and following related to Log4j**

## Summary

A vulnerability has been discovered in Apache Log4j2 JNDI features used in configuration, log messages, and parameters that do not protect against attacker-controlled LDAP and other JNDI related endpoints. An attacker who can control log messages or log message parameters can execute arbitrary code loaded from LDAP servers when message lookup substitution is enabled.

## References

<i>Reference</i>	CVE-2021-44228
<i>Date</i>	Dec 10 <sup>th</sup> , 2021
<i>Risk</i>	High
<i>Impact</i>	Execute arbitrary code
<i>Attack expertise</i>	Skilled
<i>Attack requirements</i>	Remote
<i>CVSS score</i>	10.0 (critical)
<i>Affected versions</i>	>=2.0-beta9 and <=2.14.1
<i>Fixed version</i>	2.15.0

<https://cve.mitre.org/cgi-bin/cvename.cgi?name=CVE-2021-44228>

## Description of the vulnerability

The vulnerability allows an attacker to inject arbitrary code in a payload to ask Log4J get access to data coming from a 3<sup>rd</sup> party. As Log4J do not check imported data for any non-allowed content (like commands), it allows the attack to be ran.

## Impacts

Depending on the 3<sup>rd</sup> party service invoked, the impact may differ.

## Special note

Although this Security Advisory has been triggered by initial CVE-2021-44228, the following status cover, in terms of risk, impact and action recommended by ALE, the CVE-2021-44228, the CVE-2021-45046 and the CVE-2022-23305.
